

DHL FREIGHT GLOBAL API FARM

BOOKING API & PRINT API

Global API Farm Product Team

DHL Freight – Excellence. Simply delivered.

Introduction and Background of API Initiative

EDI

File transfer technology

Legacy standard, developed
in 1940s

No definition of an universal
transport protocol

Communication is always one-way

No guaranteed data transfer
timeframe, can take 15 to 240 mins

API

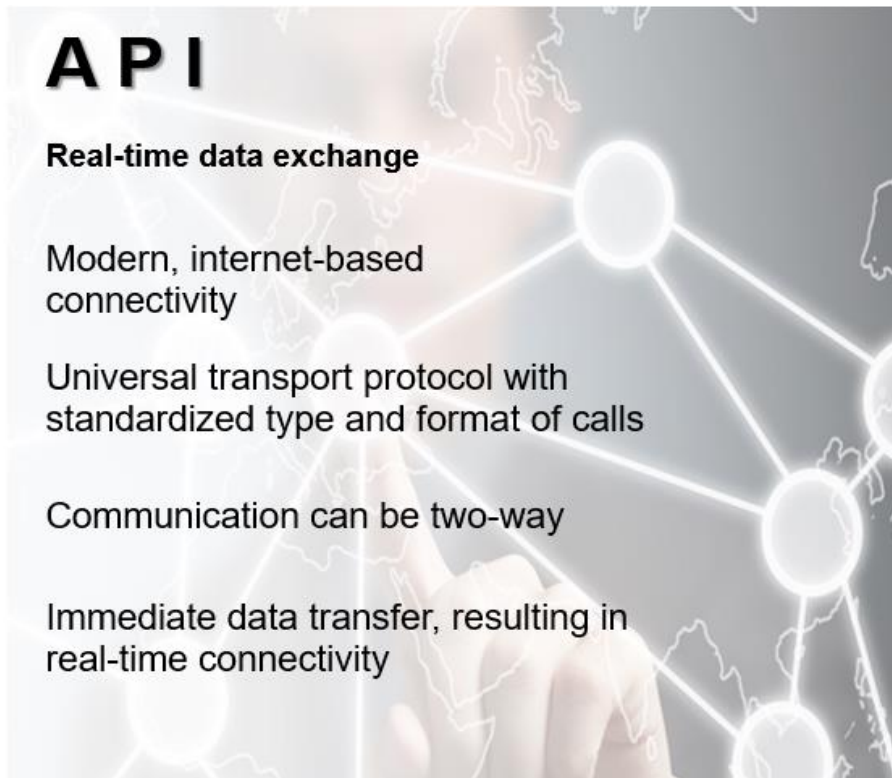

Real-time data exchange

Modern, internet-based
connectivity

Universal transport protocol with
standardized type and format of calls

Communication can be two-way

Immediate data transfer, resulting in
real-time connectivity

Offered Functionality of Global API Farm

Global API Farm (<https://test-admin.freight-logistics.dhl.com/apis>)

- **Booking API** : This API for sending in your transportation orders. Either you send in your GS1 licenses plates, or we will generate them for you. Booking data is being validated and the **Booking API** provides extensive information in its response. When successfully validated, your shipment ID is provided immediately.
- **Print API** : Use the Booking API's response to create your barcode labels (in Base64). The Print API can also be used stand-alone, without using the Booking API. It will then only create shipment labels for you.

Limitations

Booking API and Print API are available for FR, IT, AT, BE, PT, ES, CZ, PL, HU, SK, TR, RS, BG, HR, GR, RO, DE, NL on Aug'22.
More Countries will be in the scope soon.

Offered Functionality – Available APIs by Freight Global API Farm

 Applications API's Organisations Documents		
API'S		
Name	Access level	Documentation
TimeTable API	Public	Swagger
AdditionalService API	Public	Swagger
Product API	Public	Swagger
TransportInstruction API	Public	Swagger
Print API	Public	Swagger

Booking API Product manual

A successful integration requires knowledge of the possibilities and limitations of DHL Freight's products and APIs. We recommend that you first familiarize yourself with the [Booking API Product manual](#), which describes this in detail.

Most rules can also be retrieved via Product & AdditionalService API. We recommend that this method is used so that your integration will dynamically adapt to any changes in products, additional services and rules.

5b. Documentation and support

SWAGGER DOCUMENTATION

TRANSPORTINSTRUCTION

TransportInstructionModel

Example Value: { "name": "TransportInstructionModel", "description": "TransportInstructionModel" }

5a. Implement and Test
